Technologies

Languages: C, Python, Java, SQL

Backend: Spring Boot, Spring Security, REST APIs, FastAPI

AI Engineering: Spring AI, OpenAI-compatible APIs/OpenRouter, pgvector, evaluation, guardrails, observability

Databases: PostgreSQL, MongoDB, Redis

APIs and Authentication: REST APIs, GraphQL, JWT, Google OAuth, Clerk, Stripe, Razorpay

Tools and Platforms: Nginx, Git, GitHub, Vercel, Canva, Netlify, Firebase, Cloudinary, Google Cloud, AWS, DOCKER, IntelliJ Idea

Open Source Contribution

Karate-Championship-Management-App [🔗](#)

- Contributed to Karate-Championship-Management-App, a Java 21 / Spring Boot backend project for managing competitive karate tournaments.

Projects

PayFlow—DigitalWallet&Transaction Service — Java, Spring Boot, Spring Security, PostgreSQL, Docker [🔗](#)

- Built a digital wallet backend to handle concurrent money transfers safely, since unhandled concurrency can cause double-spends or corrupt account balances.
- Ran transfers under **SERIALIZABLE** isolation with pessimistic row locking, locking accounts in a consistent order by **UUID** so two opposite-direction transfers can't deadlock or leave balances inconsistent.
- Added a database-level unique constraint on idempotency keys to stop duplicate transfers from client retries.
- Wrote unit tests for edge cases – insufficient balance, self-transfer, duplicate idempotency key, invalid receiver – plus Testcontainers integration tests running in GitHub Actions CI on every push and PR.

StudySync – AI-Native Collaborative Learning Platform — Java, Spring Boot, Spring AI, WebSocket, PostgreSQL, OAuth2 [🔗](#)

- Built a platform for students to collaborate in real time and get AI help on demand, without breaking access control on who could join which study room.
- Built **42 REST APIs** across **10 controllers** powering real-time rooms and AI-assisted learning features.
- Centralized access control in a single fail-closed authorization service, so every WebSocket subscription and REST call is checked before someone can join or act in a room.
- Implemented stateless JWT authentication (HMAC-signed access tokens, DB-backed refresh tokens) alongside OAuth2 login via Google and GitHub, binding user identity by provider and provider ID.
- Set up real-time messaging over STOMP/SockJS with four room-scoped topics and a personal notification queue, using a persist-then-broadcast pattern so messages are saved before they're pushed to clients.
- Integrated **Spring AI** with **GPT-4o-mini** for four assistance modes (explain, quiz, summarize, interview).

Education

Dr. A.P.J. Abdul Kalam Technical University, ABESEC

Expected July 2027

Computer Science and Engineering, CGPA: 8.1

Certificates

- Spring Boot 0 to 100 Cohort 4.0 (AI + DevOps)
- AWS Academy Graduate- foundations in cloud computing concepts and core AWS services.
- Exploratory Data Analysis
